INTRODUCTION

"At Micronclean, our passion is to be the first to develop new technological solutions that change the shape of the markets we serve creating quality and efficiency for our customers."

For over 40 years Micronclean has focused on contamination control products for companies in the pharma, healthcare, microelectronics, aerospace and semiconductor industries. As a result, we are incredibly proud of our cleanroom consumables range which we have sold to over 30 countries around the world in the last 5 years.

The 2023 edition of our Consumables Catalogue has been updated to include new products such as the Autoclavable Goggles, alongside recycling information for all our products.

A large percentage of our range is manufactured in the UK under cleanroom conditions. For those products we do not manufacture we have full control of the supply chain and set the specification. Having the capability to manufacture means we are able to offer bespoke products and maintain sufficient stock levels to meet customer demand and our customers are able to audit our facilities.

For more information on any of our product lines please visit our website www.micronclean.com or contact us directly on cs@micronclean.co.uk or +44 (0) 1754 767377

REGIONAL ORDERING AND LABELS

MICRONCLEAN UPDATES ITS PRODUCT LABELS TO DEAL WITH DEMAND FROM EXPORT MARKETS.

Following increasing demand for our market leading disinfectant and cleaning products, we have had to enhance our existing product labels to ensure that we remain compliant.

As a result, we have generated an enhanced label which enables us to remain compliant with labeling regulations and allows us to carry up to three languages in addition to English.

So, the result of these changes is that the product code for our existing CleanGuard 1 IPA 500ml Trigger Spray Sterile will migrate from the current ZSAL64499 to ZSAL64499-A for region A orders, ZSAL64499-B for region B orders and so on. Note this regionalisation only affects products with active chemicals.

The new look labels with the associated regional codes for products will be rolled out progressively across our whole consumable range.

Regional Labels in Use

For a UK consumable customer, the default option will always be that they order region A products and they will normally receive region A products. However, as the English language is present on all the labels and labelling regulations are common across region A-E, we might on occasion substitute the same product with a region B label for instance.

For a Micronclean customer in Italy for instance, the product should always be ordered for region B and to comply with the local language regulations we will supply the product with region B labelling.

Although English is present on all the labels, for regions G and I the products are destined for Australia and India respectively. This is because they have to conform to a different set of labeling regulations in each of these countries and as such these products can only be sold and used in these countries.

Please note if you have any questions please do not hesitate to contact us.

DISINFECTANTS

RECYCLING INFORMATION

+ info see page 62

ALPHA, BETA AND DELTA TRIGGER SPRAY

CLEANGUARD 3, 4 AND 5

USAGE

Disinfection and cleaning of hard surfaces

Annex 1 states that for disinfection to be effective it must be a two-stage process. The first stage should be a process to remove surface contamination and the second stage should be disinfection using a rotational system based on two types of disinfectants which have different modes of action

Micronclean has developed Delta as a sterile neutral detergent to remove surface contamination. This should be followed by Alpha and Beta as sterile rotational disinfectants which have different modes of action and prevent the long-term build-up of resistance

BENEFITS

No bag in the bottle
Blended with WFI quality water
Filtered to 0.2µm at point of fill
Mechanically sealed trigger head
Low centre of gravity bottle design
